BRAINSTORM AND IDEA PRIORITIZATION

In the brainstorming phase of the Laptop Request Catalog Item project, the team discussed several ideas to make the laptop request process faster, more accurate, and user-friendly. The main idea was to introduce dynamic form behavior, where specific fields such as laptop type, justification, and manager approval appear based on the user's input. This would simplify the form and guide users effectively. To maintain data accuracy and governance, features like change tracking, form

validation, and clear field instructions were prioritized. After evaluating all ideas, the team decided to first focus on implementing dynamic fields, reset functionality, validation, and approval workflows, while integrating governance and system tracking in later phases

STEP 1:

TEAM GATHERING, COLLABORATION & SELECT THE PROBLEM STATEMENT

Brainstorming & Idea Collaboration: Define Your Laptop Need

Gather Team & Define Roles Problem Statement

Team Lead: Sarah Chen

- Team Chen
- Rajesh Kumar
- Stakeholder: Lisa Jones

Whiteboard Ideas

- Need powerful mobile battery good workstations the General Use
- Improve remote work setup
- Cost effective work environment of The Batings

Select Problem Statement

Problem Statement

Employees lack adequate mobile power, impacting productivity.
