

PROJECT DESIGN PHASE

PROPOSED SOLUTION

Date	28.10.2025
Team ID	NM2025TMID04506
Project Name	Laptop Request Catalog item
Maximum marks	4 marks

PROPOSED SOLUTION TEMPLATE:

S. No	Parameters and description
1.	1. . Problem Statement (Problem to be solved in rganizations, employees ften request laptops through informal methods such as emails wr verbal communication, which leads to delays, lack of tracking, and inefficient approvals. There is no centralized system to manage er meniter Laptop requests, resulting in confusion and mismanagement

2.	2. Idea / Solution Description The proposed solution introduces a Laptop Request Catalog Item built in the ServiceNow platform. This catalog item allows employees to formally submit laptop requests through a self-service portal. Automated workflows handle approvals and fulfillment, reducing manual intervention and improving request visibility.
3.	3. Novelty/Uniqueness Unlike traditional manual processes, this system leverages ServiceNow automation to streamline IT asset requests. It ensures standardized request forms, automated approval routing, and transparent status tracking for every employee request.
4.	4. Social Impact/Customer Satisfaction The solution increases employee satisfaction by reducing waiting time for laptop provisioning and providing real-time updates. It also improves accountability among IT and managerial teams, leading to higher organizational productivity.
5.	5. Business Model (Revenue Model) While not directly revenue-generating, it saves significant operational costs by minimizing manual effort, reducing data errors, and improving IT asset management efficiency.

Conclusion

The “Laptop Request Catalog Item” project streamlines the laptop provisioning process by digitizing and automating request, approval, and fulfillment workflows. By using ServiceNow’s catalog and flow designer capabilities, it eliminates manual intervention, reduces processing time, and enhances visibility for both employees and IT administrators.

This solution not only increases productivity and transparency but also strengthens IT asset governance. The system’s scalable and modular design allows easy adaptation to other asset types, building a foundation for smart IT service automation in enterprise environments.
